

Data Analysis Report

Domain: FINANCE

Generated: 2026-08-23 11:42

Executive Summary

The dataset contains 600 transactions across 8 categories with an average transaction amount of \$3409.51. The highest average transaction amount is observed in the 'Unknown Merchant' category with \$35831.39. The 'Groceries' category has the highest average transaction amount among the regular merchant categories with \$4443.83.

Key Insights

- The 'Unknown Merchant' category has a significantly high average transaction amount, indicating potential anomalies or unusual transactions.
- The 'Groceries' category has the highest average transaction amount among regular merchant categories, suggesting high spending in this category.
- The average transaction amount varies significantly across different locations, with Coimbatore having the highest average transaction amount of \$4235.62.

Risk Areas

- High-value transactions in the 'Unknown Merchant' category may indicate potential fraud or anomalies.
- Transactions with unusually high amounts in the 'Groceries' category may require further investigation.

Recommendations

- Implement IQR or z-score based outlier detection on transaction amounts to identify potential anomalies.
- Monitor transactions in the 'Unknown Merchant' category closely to detect potential fraud.
- Analyze spending patterns in the 'Groceries' category to identify unusual transactions.
