

Data Analysis Report

Domain: HEALTHCARE

Generated: 2026-08-06 16:45

Executive Summary

The dataset contains 550 records of medical supplies across various districts and suppliers, with an average opening stock of 251.99 and an average lead time of 10.34 days. Stockout rates vary across products and districts, with some districts experiencing stockout rates as high as 29.63%.

Key Insights

- The average lead time for medical supplies is 10.34 days, with a standard deviation of 5.2 days, indicating some variability in delivery times.
- Stockout rates vary significantly across products, with Amoxicillin experiencing a stockout rate of 12.5% and Iron Tablets experiencing a stockout rate of 25.35%.
- Districts also experience varying stockout rates, with Chennai experiencing a stockout rate of 29.63% and Coimbatore experiencing a stockout rate of 13.33%.

Risk Areas

- High stockout rates in certain districts and for specific products may indicate supply chain disruptions or inefficiencies.
- Variability in lead times may impact the reliability of medical supply deliveries.

Recommendations

- Analyze the root causes of high stockout rates in districts such as Chennai and for products such as Iron Tablets to identify opportunities for improvement.
- Investigate the factors contributing to variability in lead times and explore strategies to reduce lead time variability.
- Develop targeted interventions to address stockout rates and lead time variability, such as optimizing inventory management or improving supplier relationships.
